

I am strongly opposed to BPL (aka PLC) due to the direct interference that it will produce in HF and lower VHF spectrum as well as that from the harmonics and sub harmonics.

I feel that there is an undue risk to the public.

Some emergency services operate in this region (fire departments, etc).

Another of my concerns is interference to Medical equipment.

It would seem to me that this rf hash generated in the BPL system has a strong probability of interference to medical equipment used not only in hospitals but for home bound patients that is hooked to commercial power as well.

Thank you
